## OVERVIEW

---

I'm a junior cryptography researcher, so far mainly working on Secure Multiparty Computation (MPC) and Oblivious RAM (ORAM). I plan to apply to P.h.D. programs in cryptography in December'23. Outside broad fascination in theoretical CS and math, I am also interested in blockchains (Ethereum in particular), Australian rock music, more math, Bob Dylan, and rationality.

## PUBLICATIONS

---

Authors in alphabetical order unless stated otherwise.

- **[DORAM revisited: Maliciously secure RAM-MPC with logarithmic overhead](#)**

We give the first malicious construction of Distributed ORAM while matching the asymptotics of the best-known semi-honest constructions. As a corollary, we give the *first* maliciously-secure MPC with logarithmic random access overhead.

[B. Falk](#), [D. Noble](#), [R. Ostrovsky](#), M. Shtepel, [J. Zhang](#)

*Accepted to TCC'23*

- **[GigaDORAM: Breaking the Billion Address Barrier](#)**

We construct and implement the most practically efficient Distributed Oblivious RAM (DORAM) protocol to date, outperforming all existing DORAM constructions by [over 400x](#). We hope our construction will enable RAM-MPC to be deployed in practice.

[B. Falk](#), [R. Ostrovsky](#), M. Shtepel, [J. Zhang](#)

*Accepted to USENIX '23*

- **[On Totalization of Computable Functions in a Distributive Environment](#)**

[Mark Burgin](#), Matan Shtepel.
